

# myzone Receiver setup

**1** When setting up your Myzone system it is important that the receiver is located correctly to ensure the Myzone system operates effectively.

**2** The Myzone receiver USB cable must be plugged into the Myzone mini PC and Touchscreen.

**3** Myzone Receiver should have direct line of sight with Myzone devices.

**4** Myzone Receiver is ideally positioned in front of the users for optimal performance.

**5** Myzone Receiver will detect Myzone devices up to a range of 50 meters in an open area.

**6** Obstacles including the human body, structural columns and walls, glass partitioning and other 2.4GHz items will affect the operational range of the Myzone Receiver.

## Good to know .....

**1** Myzone devices that have stored data will upload if they are within the 10 metre range of a Myzone Receiver.

**2** Avoid using the Myzone Receivers in areas that have a high concentration of electrical distribution boards or other electrical equipment.

## Separate 'areas' will require separate Myzone hubs .....
